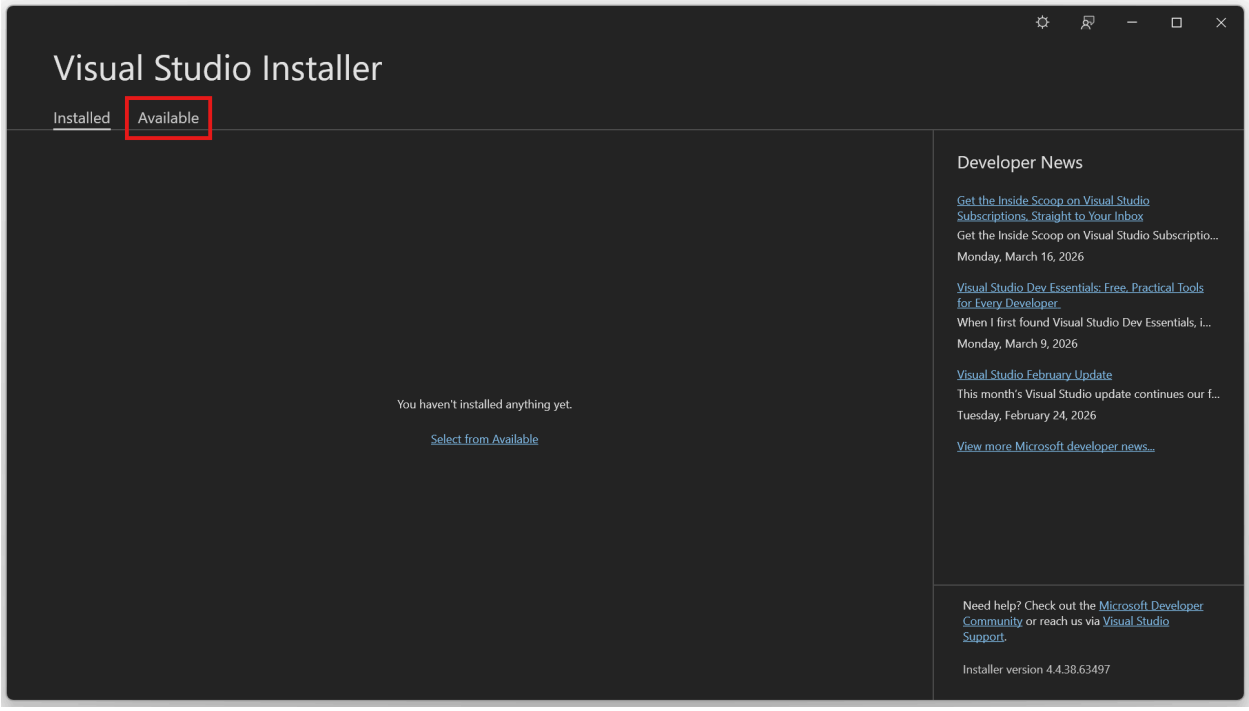
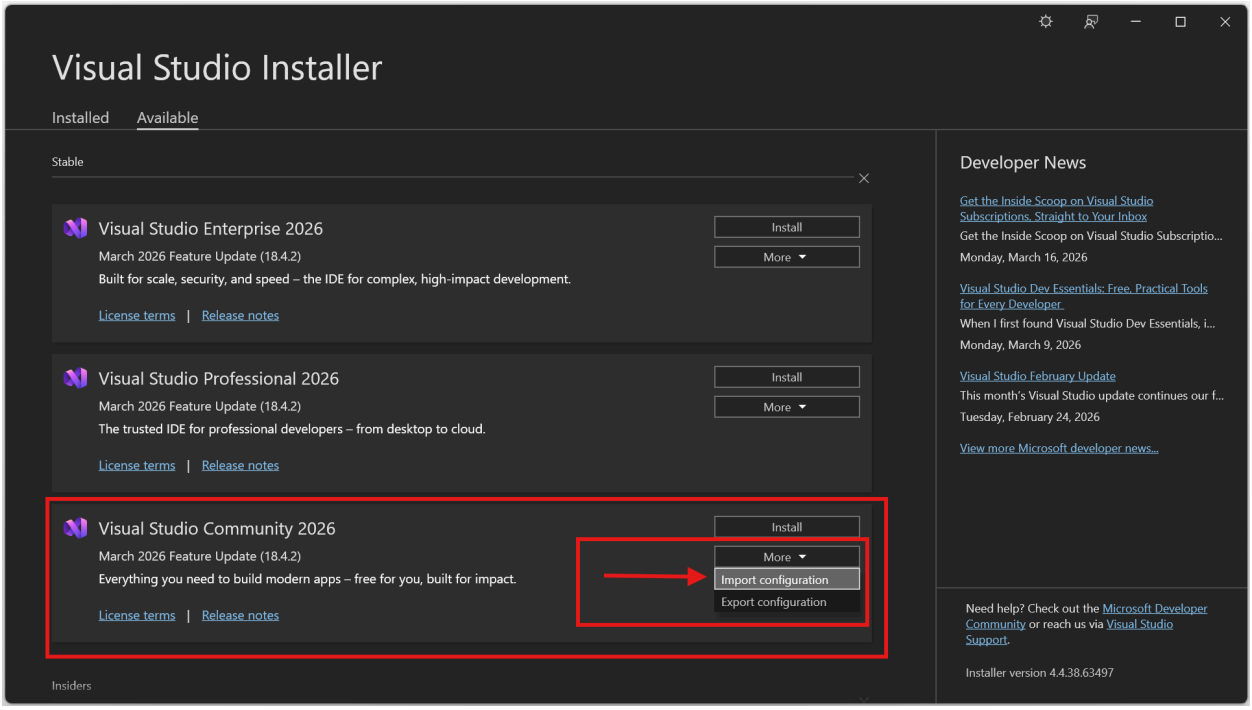
1. Download the visual studio installer here: https://visualstudio.microsoft.com/vs/community/

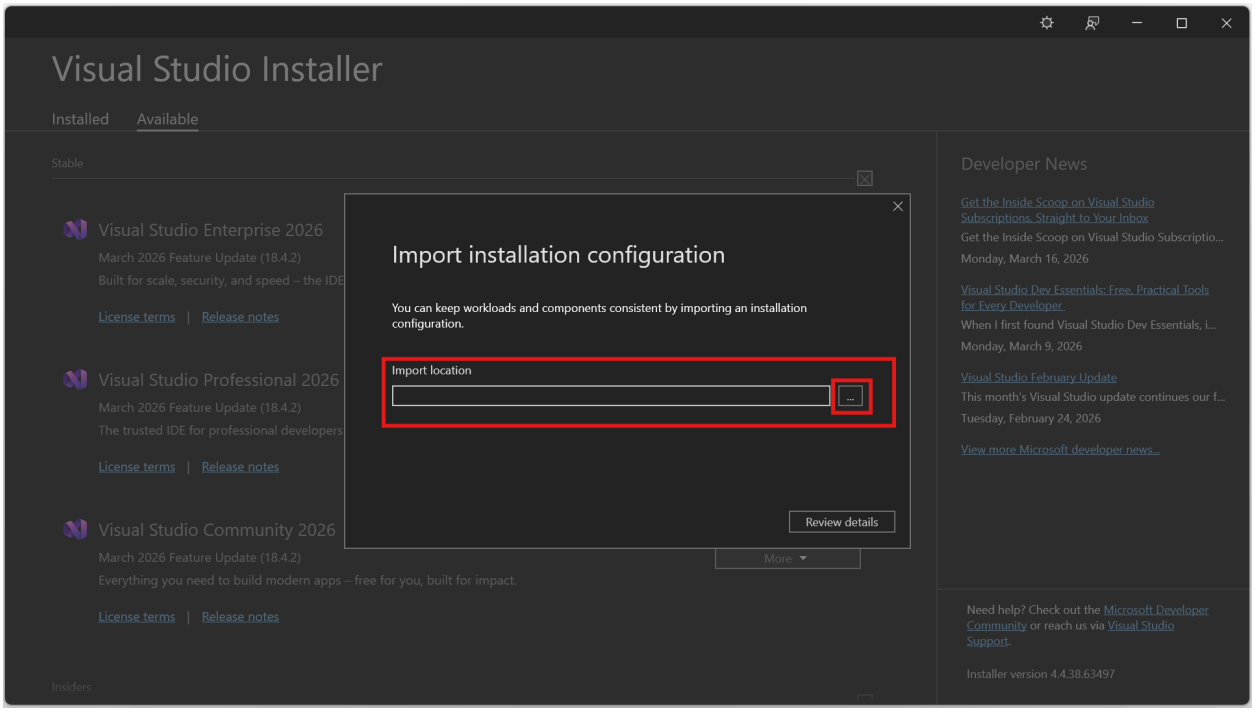
2. In the installer click the tab that says “Available”



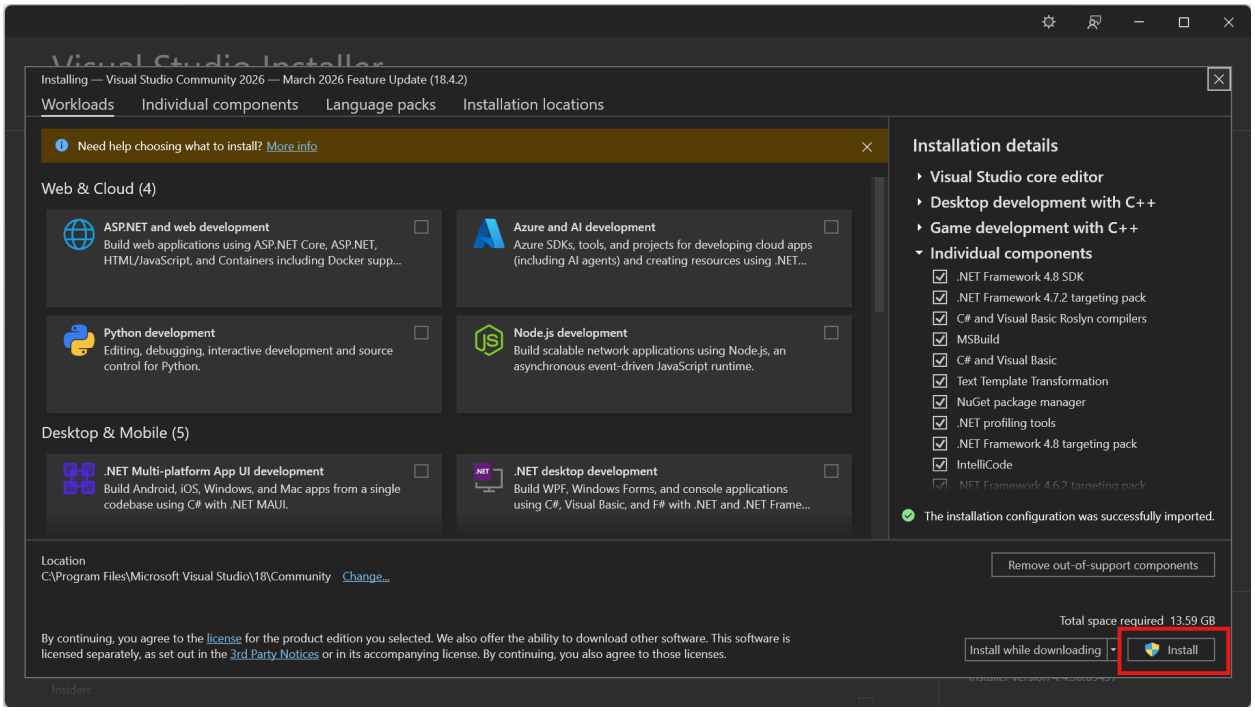
3. Go to where it says Visual Studio Community 2026 and click “More” then select “Import Configuration” from the drop down.

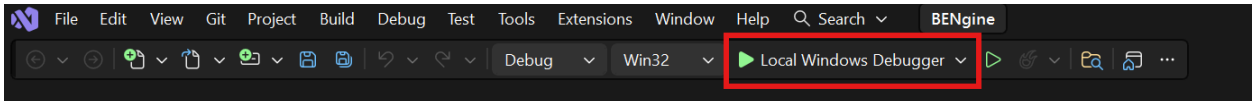


4. A window will appear asking you for a file path. Click the 3 dots and navigate to the file titled ".vsconfig" then double click it. Afterwards click the "Review details" button.



5. Another window will open up. DO NOT CHANGE ANYTHING! Just click install.





6. Once it is installed, double click on BENgine.sln which is located in the folder titled "BENgine" in the file explorer. Once in Visual Studio Community 2026 you can run the engine by clicking the button that says "Local Windows Debugger" Make sure it is set to Debug and Win32.
